

Components:

- Two Presentation Versions
  - Teacher Guide
  - Activity Sheets
  - Supplemental Material
- 

### Presentation

There are two forms of the presentation

- Visual Projection
    - One slide per page
    - Rich color backgrounds
  - Print Handouts
    - Light background
    - 2 slides per page
- 

### Teacher Guide / Presenting Information

- The Teacher Guide is formatted with the slide (sans background) on the top and notes for the teacher on the bottom.
  - Slide text is written so students can take turns reading the text aloud or the teacher can read it for the class.
  - Some slides have additional information in the notes section for the teacher to either answer questions from the class or give additional anecdotal information, if desired.
- 

### Timing

If the presentation is given with no additional participation, it takes approximately twenty (20) minutes. We recommend setting aside at least 30 – 40 minutes for the initial presentation to include participation. Allow 60 minutes if including activity directions and time to start working on projects.

## Activities & Icons

Activities are categorized into three sections:

- Individual
- Small Group
- Entire Class

Activities have been created in such a way to touch on all different learning aspects to include:

- Research
- Writing
- Math
- Geography
- Imagination
- Presentation
- Group Dynamics

Time to complete activities ranges from a few additional minutes (such as the Follow Along – done in conjunction with the presentation), thirty minutes of homework, or up to a month or more. The teacher decides which activities to assign the class, if any.

There are two icons on the Activity sheet:

= There is a corresponding hand out to give the students as a part of the activity.

= There is supplemental information for the teacher to use / reference for the activity.

---

## Supplemental Material

Some activities need additional information in order to complete. The supplemental material offers information not included in the basic presentation in order to enhance the educational experience.

---

## Technology Needs

For best effect, the presentation needs to be displayed in large form at the front of the room, using a computer attached to a projector or monitor, allowing the file to be displayed. To see the pdf in full version select the expand button in Adobe Acrobat.
